THE TECHNICIAN ARRIVED ON JOBSITE AS REQUESTED BY TRACY SAIN OF ENTACT, TO PERFORM DENSITY TESTS ON SOIL, UTILIZING A NUCLEAR DENSITY GAUGE TO CHECK COMPACTION AN MOISTURE CONTENT OF SOIL. TEST RESULTS INDICATED THAT THE MATERIALS TESTED MET OR EXCEEDED THE PROJECT REQUIREMENTS OF 95% OF THE MAXIMUM DRY DENSITY AND ALSO MET MOISTURE REQUIREMENT AT THE LOCATIONS AND ELEVATIONS TESTED. THE MAXIMUM DRY DENSITY WAS OBTAINED IN OUR LABORATORY USING THE STANDARD PROCTOR METHOD. THIS DATE TECHNICIAN TESTED @ 12" BELOW SUBGRADE AND COMPACTIVE EFFORT WAS NOT WITNESSED.

Client ENTACT Contractor ENTACT

The technician arrived onsite, as requested by JASON KIZER of ENTACT on April 25 to observe fill placement and perform density tests on soil, utilizing a nuclear density gauge to check compaction and moisture content of soil. Test results indicated that the materials tested met or exceeded the project requirements of 95 % of the maximum dry density and also met moisture requirements at the locations and elevations tested. The maximum dry density was obtained in our laboratory by using the STD Proctor Method. See attached density report and drawing.

Dear Mr. Kizer,

Enclosed you will find reports signed by a Gallet & Associates, Inc. Engineer for the project referenced above.

These services were provided on an on-call basis. Gallet & Associates recommends that fill be placed in 8-inch loose lifts and each lift tested to verify specified compaction densities. However, part-time testing can result in thick lifts of fill being placed without testing. Our tests verify compaction levels at the particular test location and only the eight inches (approximate) of fill below the elevation at the time of testing. These tests do not reflect the compaction level of other fill layers.

If you should have any questions concerning these reports or if we can be of further service to you, please do not hesitate to contact me at (256) 835-1155.

Sincerely,

A. Todd Cheatwood
CMT Manager

Re: Air Monitoring, Central Staging Area

This letter is intended to serve as documentation for the record that there have been no observed dust levels exceeding the allowable time-weighted averages at the Central Staging Area for the Anniston PCB Site. This certification is based on daily observation of the CSA by the Field Project Manager (FPM) and Health and Safety Officer (HSO). The protective measures employed at the CSA included application of water to prevent visible dusts, periodic visual observation of the area, monitoring with direct reading Real-Time Aerosol Monitors (RAM) and covering the material with plastic sheeting to prevent wind dispersion and run off.

Should you have any question, please contact me at 972.580.1323.

Sincerely,
ENTACT Environmental Services

R. F. (Rick) MacIntyre, CSP
Project Health & Safety Coordinator

Note: This letter pertains to data between dates August 2, 2004 and February 12, 2005, lost as a result of a stolen computer.

Re: New Mars Hill Baptist Church Borrow Source Soil Sampling, Anniston, Alabama

---

On July 1, 2004, Genesis Project, Inc. conducted a sampling event at the new Mars Hill Baptist Church Borrow Source in Anniston, Alabama, involving a borrow source of fill material being used at the PCB remediation properties in Anniston, Alabama. The purpose of this sampling event was to ensure that the soil from the borrow source was free of PCB contamination.

Sampling Procedures

One composite soil sample (MH-SP-1) was collected as representative of the source location. The composite sample was made up of aliquots collected from four previously excavated test pits, as well as three additional aliquots collected from surface soil at randomly selected locations within the borrow source. The composite sample was collected utilizing a stainless steel hand auger and thoroughly mixed in a stainless steel bowl with a stainless steel spoon before being placed into a certified clean sample jar.

Soil Sample Analyses

The composite soil sample was sent to STL Laboratories in Savannah, Georgia for PCB analysis by US EPA Method 8082. A field blank (SB-1) and a spiked sample of known concentration (SSP-1) were submitted to the laboratory for QA/AC purposes. The laboratory analytical results are presented in Table 1 and a copy of the laboratory report is provided in Attachment 1. Laboratory analysis indicates that the soil sample did not contain PCBs in concentrations above laboratory detection limits. Additionally, the laboratory results were acceptable for the soil blank and the spiked sample.

P = Identification of target analytes using GC methodology is based on retention time. Although two dissimilar GC columns confirmed the presence of the target analyte in the sample, relative percent difference is >40 %. Thus, viewer discretion should be employed during data review and interpretation of results for this target compound.
